# Simulate the lifecycle stages for UI design using the RAD model and develop a small interactive interface using Axure RP

#### AIM:

The aim is to demonstrate the lifecycle stages of UI design via the RAD model and develop a small interactive interface employing Axure RP.

## **PROCEDURE:**

**Tool Link: https://www.axure.com/** 

## Simulating the Lifecycle Stages for UI Design Using the RAD Model

RAD Model (Rapid Application Development): The RAD model emphasizes quick development and iteration. It consists of the following phases:

- 1. Requirements Planning:
  - o Gather initial requirements and identify key features of the UI.
  - Engage stakeholders to understand their needs and expectations.
- 2. User Design:
  - Create initial prototypes and wireframes.
  - Conduct user feedback sessions to refine the designs.
  - Use tools like Axure RP to develop interactive prototypes.
- 3. Construction:
  - Develop the actual UI based on the refined designs.
  - Perform iterative testing and feedback cycles.

#### 4. Cutover:

o Deploy the final UI.

• Conduct user training and support.

## **Axure RP Interactive Interface Development**

## **Phase 1: Requirements Planning**

## 1. Identify Key Features:

- Navigation (Home, Product Categories, Product Details, Cart, Checkout,
  Order Confirmation, Order History)
- User actions (Browsing, Searching, Adding to Cart, Checkout, Tracking Orders)

## 2. Create a Requirements Document:

- List all features and functionalities.
- o Document user stories and use cases.

## **Phase 2: User Design**

### 1. Install and Launch Axure RP:

- Download and install Axure RP from Axure's official website.
- Launch the application.

#### 2. Create a New Project:

- Go to File -> New to create a new project.
- Name the project (e.g., "Shopping App Interface").

#### 3. Create Wireframes:

- Use the widget library to drag and drop elements onto the canvas.
- o Design wireframes for each screen:
  - Home Page
  - Product Categories
  - Product Listings
  - Product Details
  - Cart
  - Checkout

- Order Confirmation
- Order History

#### 4. Add Interactions:

- Select an element (e.g., button) and go to the Properties panel.
- Click on Interactions and choose an interaction (e.g., OnClick).
- Define the action (e.g., navigate to another screen).

#### 5. Create Masters:

- Create reusable components (e.g., headers, footers) using Masters.
- Drag and drop masters onto the wireframes.

#### 6. Add Annotations:

- Add notes to describe each element's purpose and functionality.
- Use the Notes panel to add detailed annotations.

#### **Phase 3: Construction**

# 1. Develop Interactive Prototypes:

- Convert wireframes into interactive prototypes by adding interactions and transitions.
- Use dynamic panels to create interactive elements (e.g., carousels, pop-ups).

#### 2. Test and Iterate:

- Preview the prototype using the Preview button.
- o Gather feedback from users and stakeholders.
- Make necessary adjustments based on feedback.

### Phase 4: Cutover

## 1. Finalize and Export:

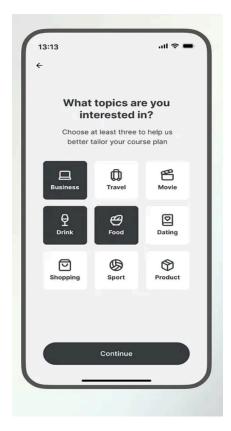

- Finalize the design and interactions.
- Export the prototype as an HTML file or share it via Axure Cloud.

## 2. User Training and Support:

- Conduct training sessions to familiarize users with the new interface.
- Provide documentation and support for any issues.

## **OUTPUT:**

# **RESULT:**

The lifecycle simulation using the RAD model in axure RP is implemented and executed.
